

Introduction

- An Analytics COE of an organization helps to drive and accelerate the design and execution of Analytics & AI capabilities to showcase measurable value and business impact. It also enables streamlined delivery of Analytics capabilities to conceptualize, build, and deliver robust Analytics products to meet the needs of the business.
- ABC Corp's Analytics Center of Excellence (ACOE) drives innovation in data management, analysis and reporting. Its overarching goal is to enable data-driven decision making, focus on time-to-value, and maximize benefits that various platforms, knowledge and solutions can bring.
- Building a mature data and analytics setup is a necessary step to achieve the goals of business. Leveraging data as a strategic asset will increase the effectiveness, facilitate oversight, and promote transparency.

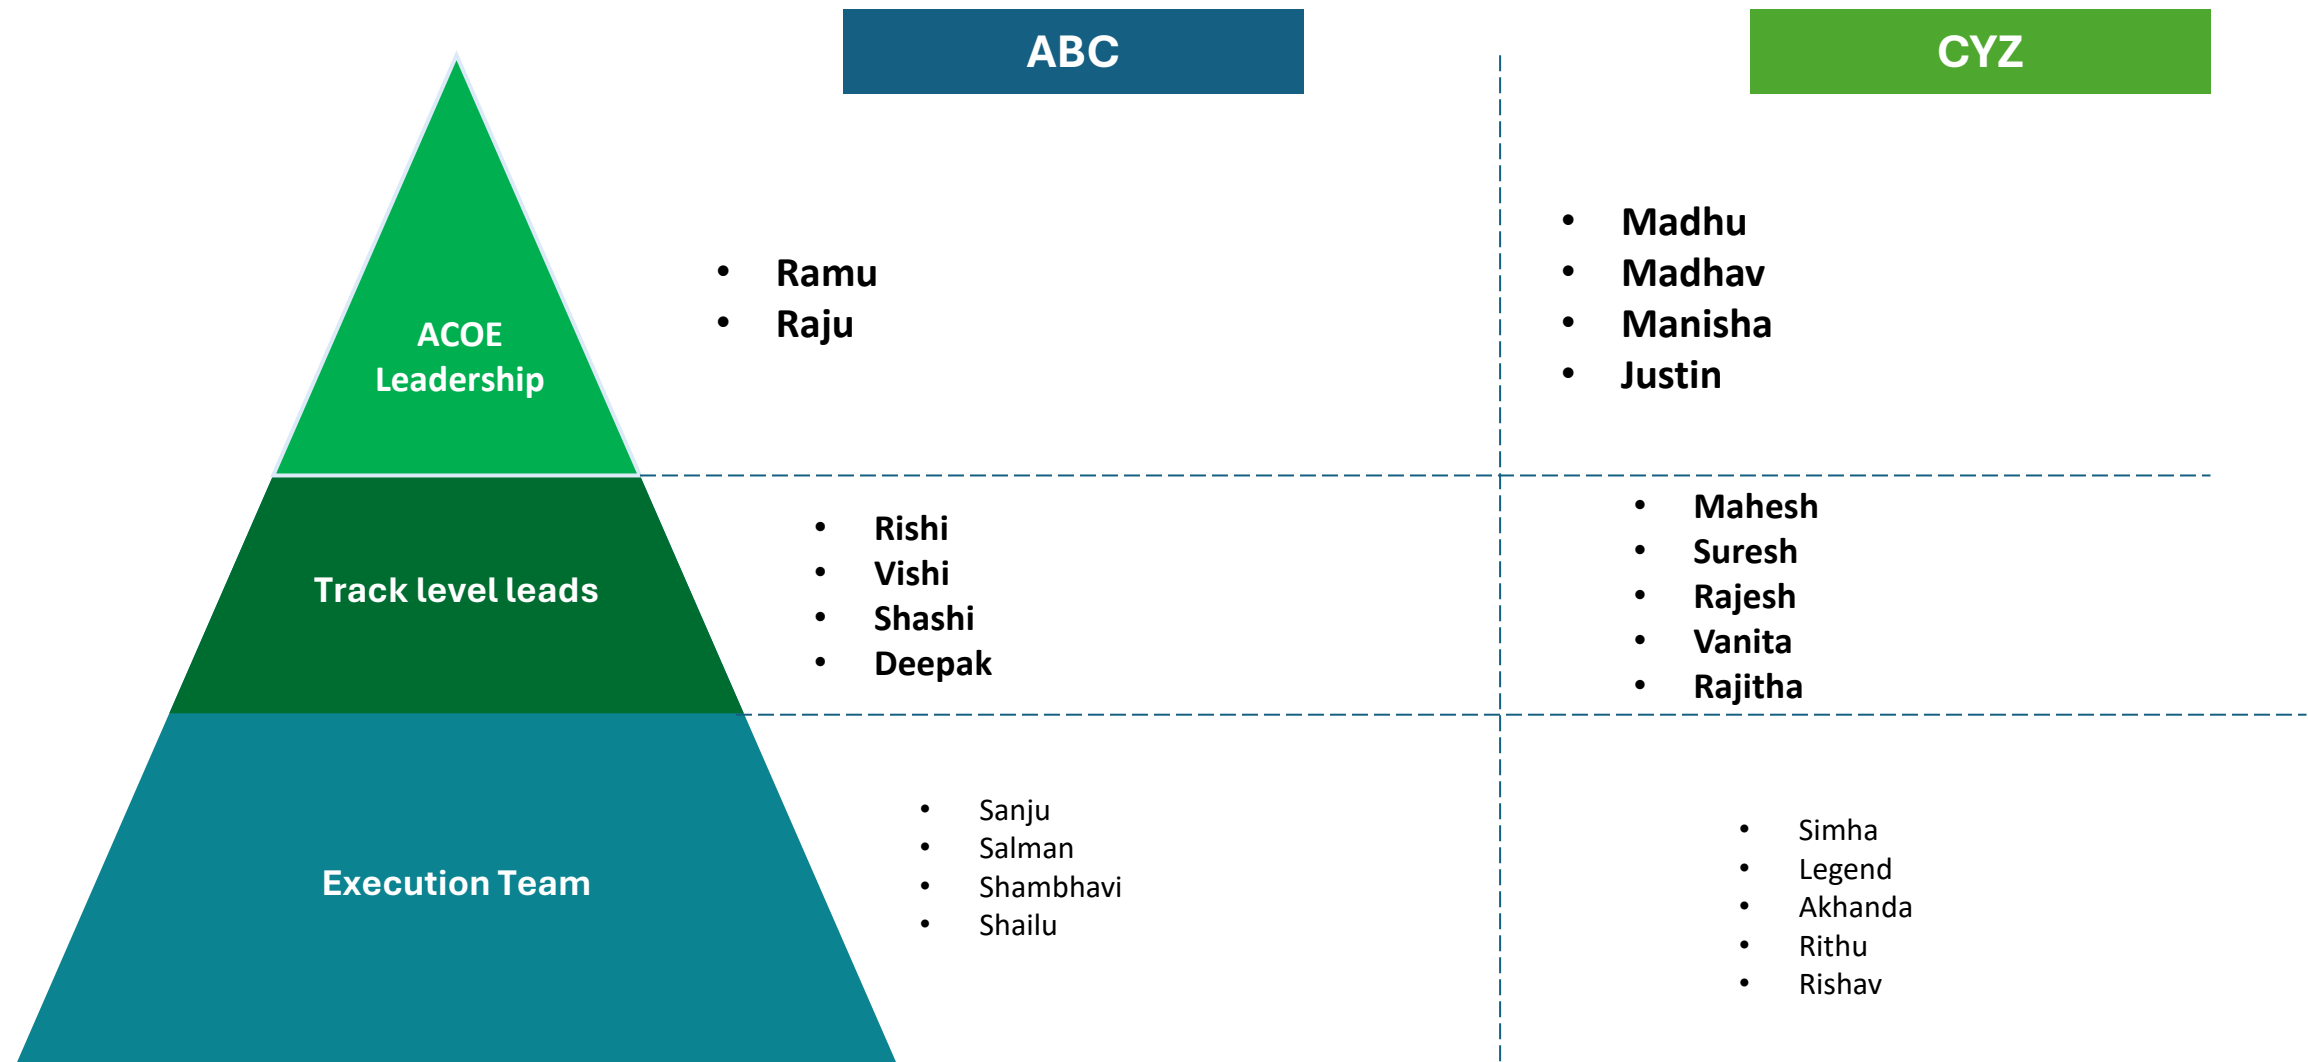

ACOE Governance Structure

Governance structure aims to provide stakeholders across the various teams at ABC Corp with program activity transparency. It is designed to increase program operating dynamics and ensure active participation in program/ project decision-making processes. Team members are empowered to take ownership for the project and understand their responsibilities and accountabilities.

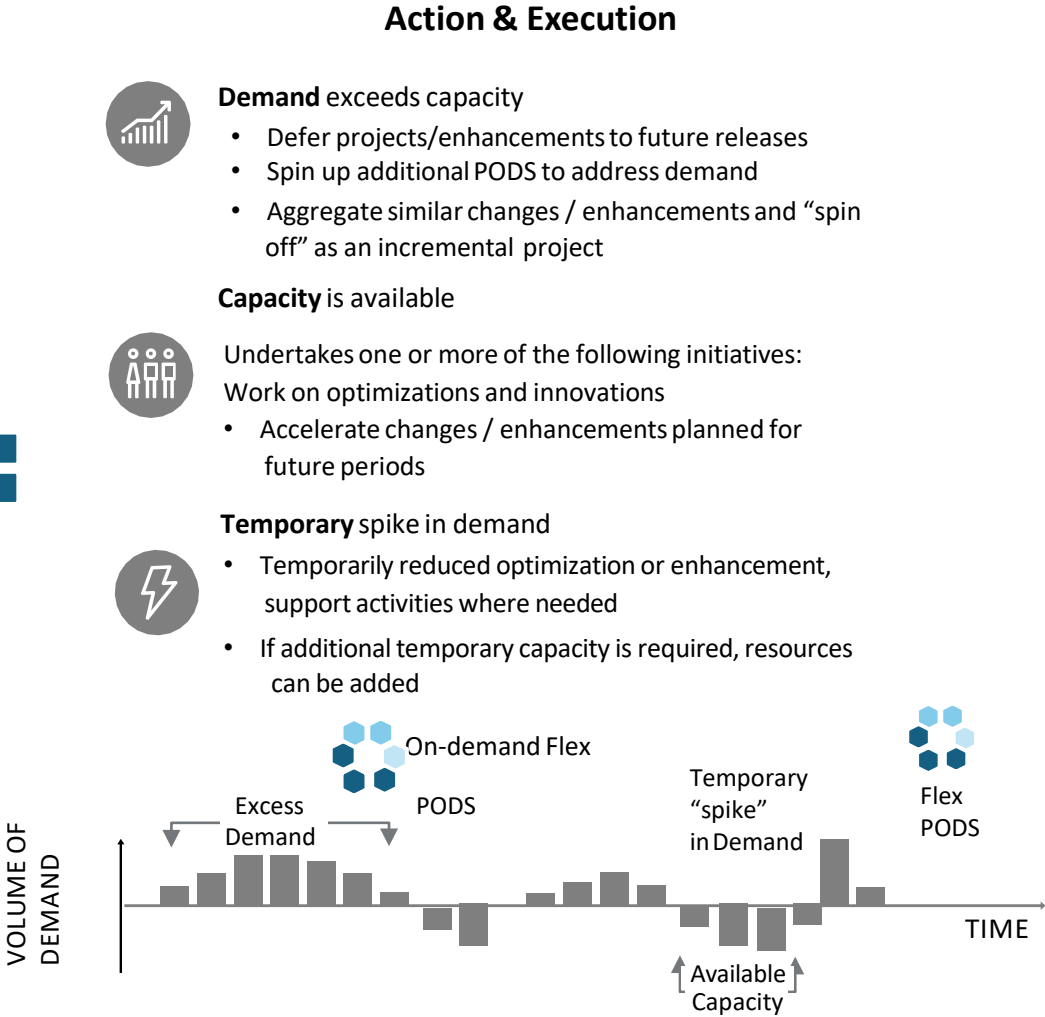

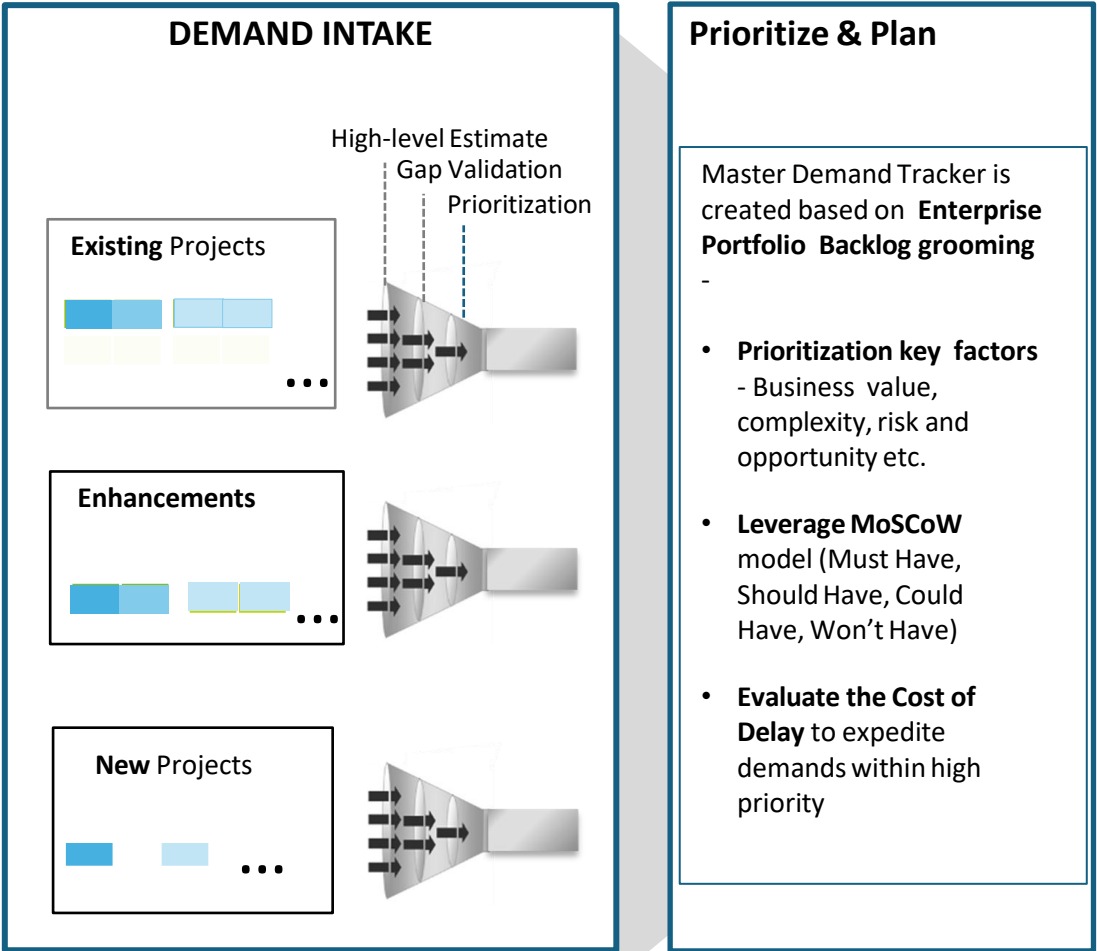

ACOE SPOC Details

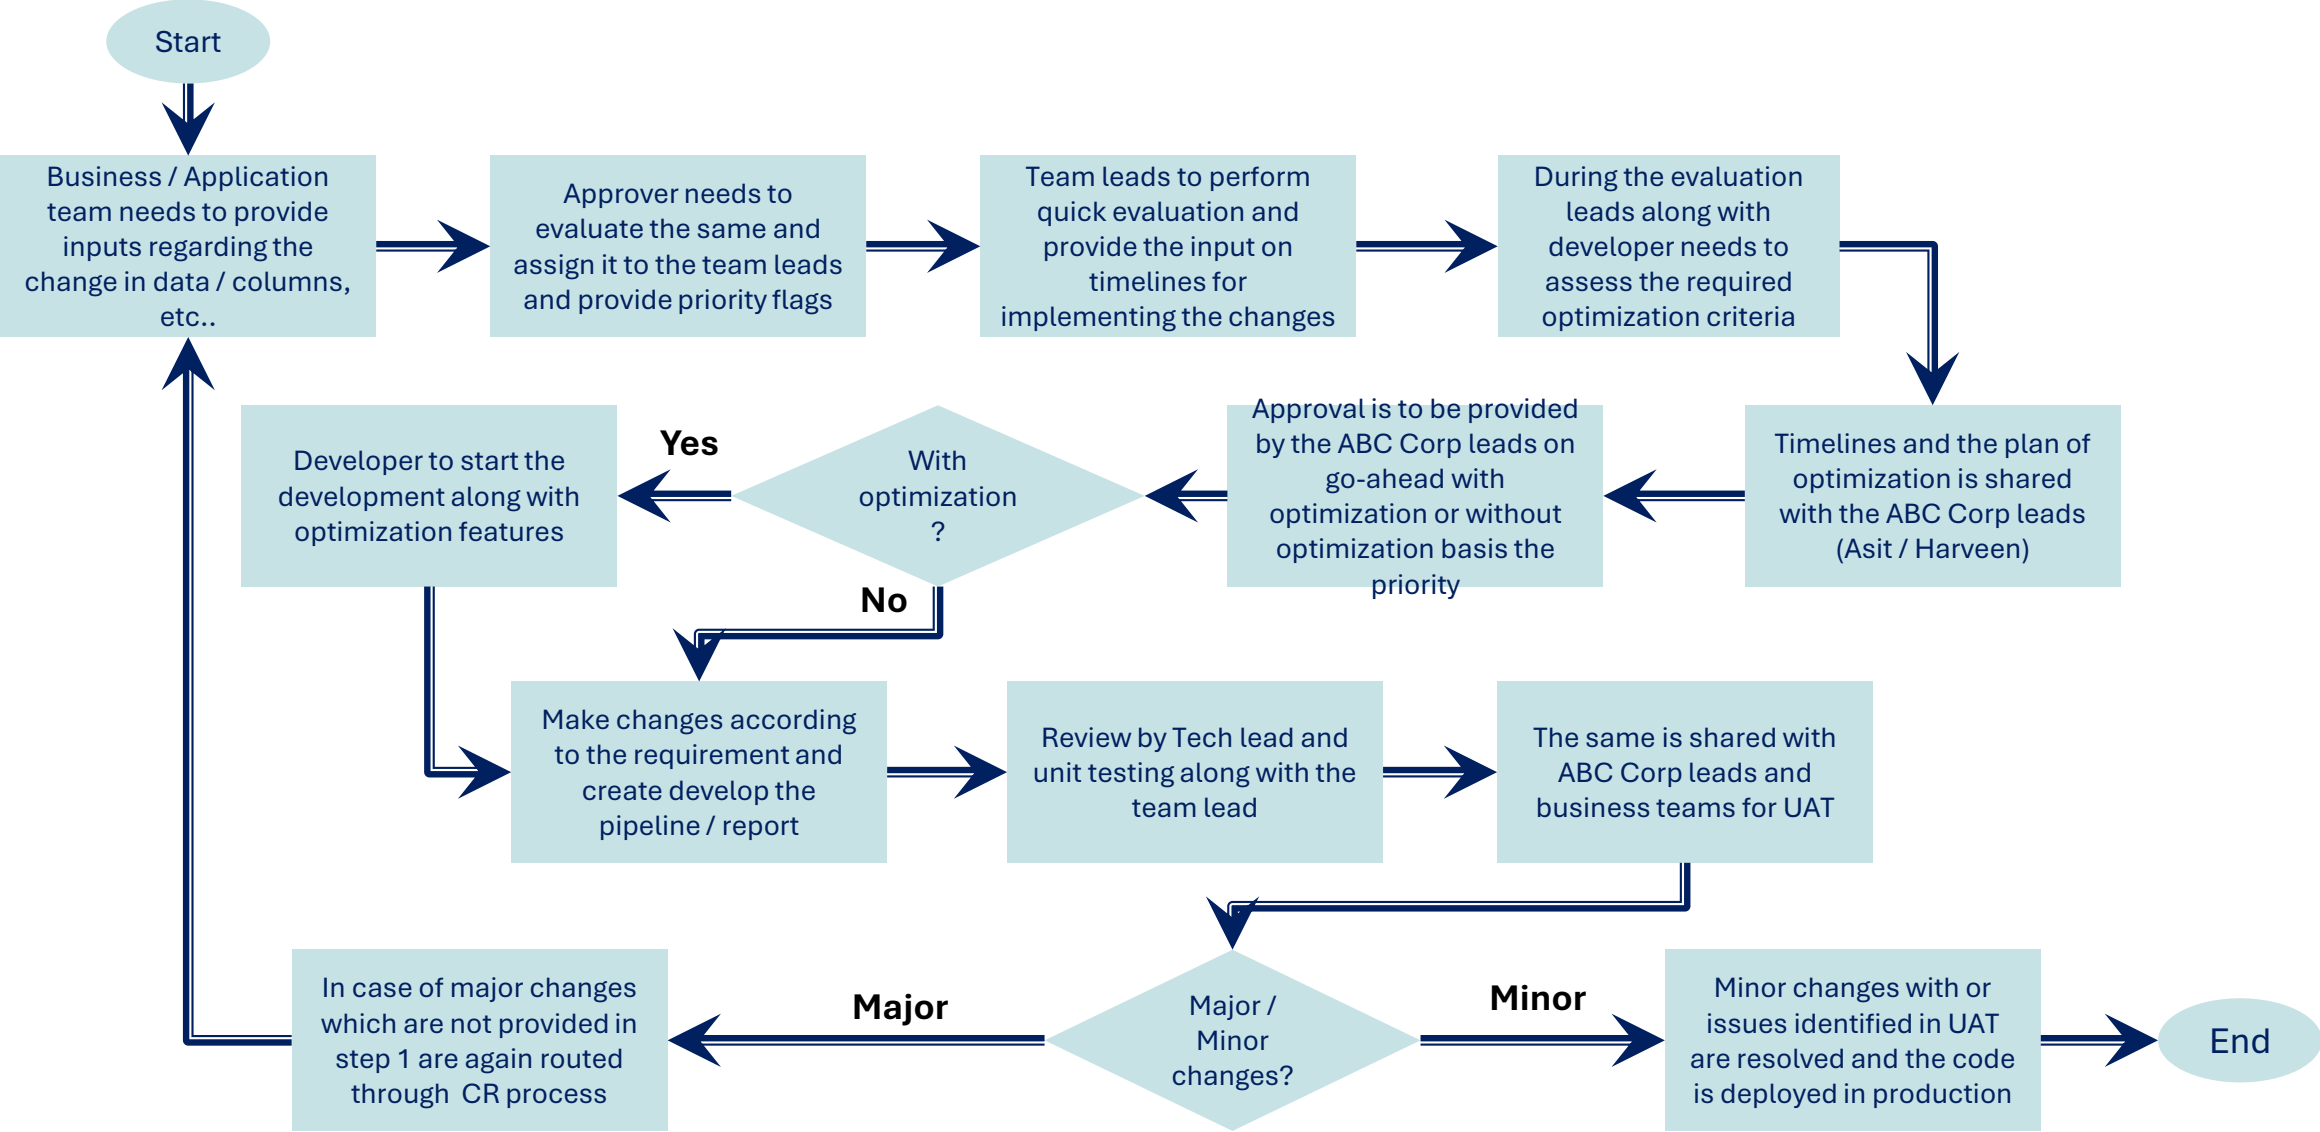

ABC Corp names to be added post discussion

Intake Management and Demand Prioritization

Change Request Management – Process Flow

New Request Management – Process Set-Up

Request Submission

- Business teams (Iubes, LIG, Application teams, etc..) submits new project via email with supporting documents or attachments to Sudhakar sir.

Preliminary Review

- RRR along with Business Analyst and Functional team gathers requirements to assess the feasibility, alignment and priority
- Request is approved and priority assigned.

Team Engagement

- Business Team connects with client to refine scope and expectations.
- Establishes clarity before documentation begins.

Documentation & Estimation

- Business Analyst prepares BRD/SDD (requirements, As-Is & To-Be flows).
- Tech Team provides a high-level effort and time estimate.

Client Validation & Approval

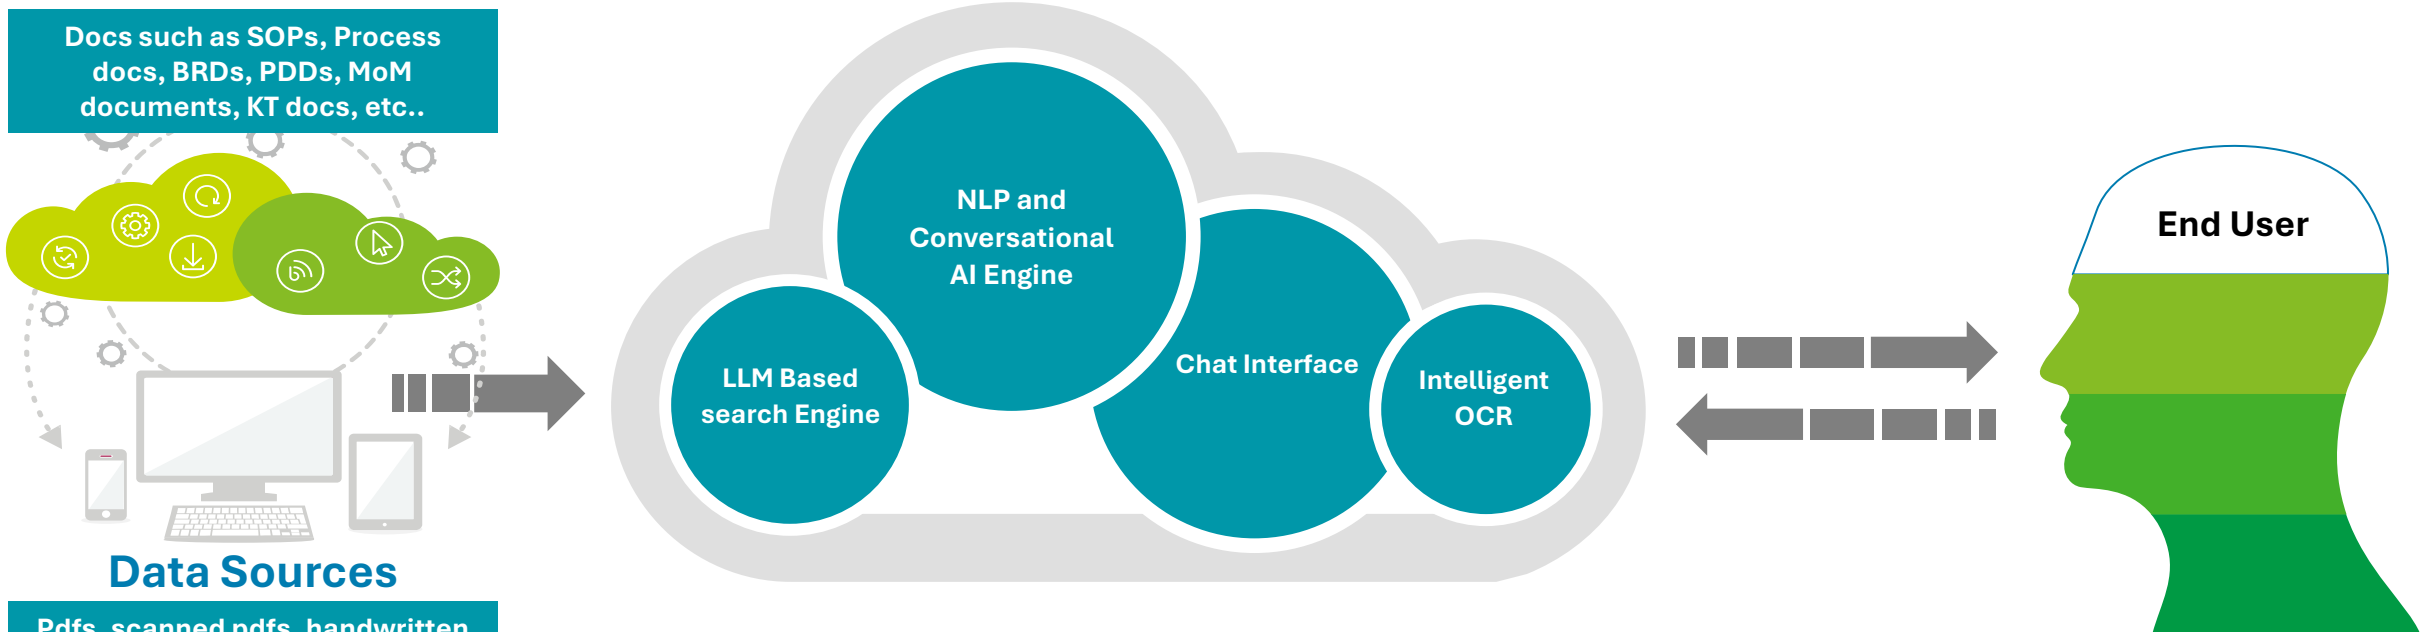

- Business team reviews BRD/SDD and estimation.
- Provides sign-off to move into execution.

Delivery Phases

- Structured execution in stages:
- **Development (DEV)** – Build/configure solution
- **UAT** – Client validates solution
- **Implementation** – Rollout into production

AI Enabled Chatbot – Features and Benefits

KEY BENEFITS

Enhanced Experience

End user is provided with a unique experience and ease of usage as the chatbot provides conversational experience

Scalable & efficient

The chatbot is scalable to other use cases such as tender doc / content retrieval, Summarization of large documents, etc..

Ease of Integration

In addition to analyzing and generating knowledge, agent systems can use tools and communicate across a broader digital ecosystem

Reduced manual effort

By delivering actionable insights quickly, Agentic AI chatbot enables adaption to changes in preferences and human dynamics, ultimately leading to cost reductions

Self-learning

By tapping short- and long-term contextual memory resources that are often unavailable in a pre-trained language model, AI agents can rapidly improve their output quality over time.

Data Quality Initiative – Customized Hybrid Solution (1/2)

KEY BENEFITS

Comprehensive coverage

IT, Business, and Contextual Data Quality addressed through specialized tools.

Scalable & efficient

Gen AI accelerates detection of anomalies, while DQX enforces business and context rules systematically

Continuous improvement

Hybrid approach allows iterative enhancements and adaptive quality controls.

Reduced manual effort

Automation reduces dependency on manual rule creation and monitoring, freeing resources for higher-value tasks.

Single view of data quality

Integration of both solutions provides unified reporting and dashboards for decision-making.

Thank You
